

**New!**

First cassette toilet  
with ceramic inlay and  
biggest cassette tank.

**More hygiene**

In every recreational vehicle.

## The hygienic revolution for top comfort

The ceramic inlay in the plastic unit of the CT 3000 is a true innovation for recreational vehicles. It makes your sanitation system easy to clean and scratch-resistant which insures an unsoiled appearance for many years. Identical with household toilets in shape, height and material the CT 3000 offers top comfort.

### More room in the bathroom

Compared to common products the round seat gains 80 mm of depth in the narrow space of the bathroom. For maximum flexibility the seat can be rotated up to 180°, making corner installation possible. With the CT 3000 you can enjoy cleanliness and comfort like at home in your mobile home!

- High quality toilet with patented china bowl inlay: easy to clean and durable
- Modern household design with large seat and comfortable sitting height
- Highly flexible due to adjustable seat: moveable up to 180°
- Extremely strong and stable construction
- Round seat saves valuable space in the bathroom
- Applicable for all bathroom layouts

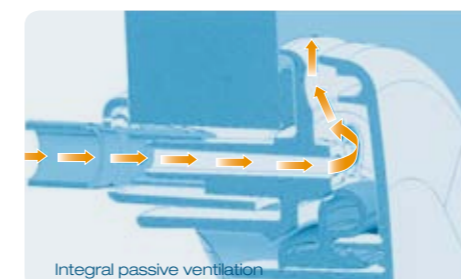

## Easy to handle: new cassette generation

Another highlight of the CT 3000 is the easy-to-transport holding tank which is equipped with wheels and telescopic handle. With 19 litres volume it has the biggest capacity currently available. The technological features for disposal are state-of-the-art – with tank level indicator, pivoting outlet connection and warning signal when the tank is removed.

### Matching locker door

Accessing the tank is child's play due to a custom-made locker door by Dometic Seitz with integral passive ventilation. An air outlet through the vehicle floor is no longer necessary. The locker door perfectly blends into the exterior of your recreational vehicle and prevents the risk of draining water.

- Biggest tank capacity in the market: 19 l
- Information panel displaying tank level
- Telescopic handle with two struts and strong wheels for easy handling of the cassette
- Easy to clean due to big service opening

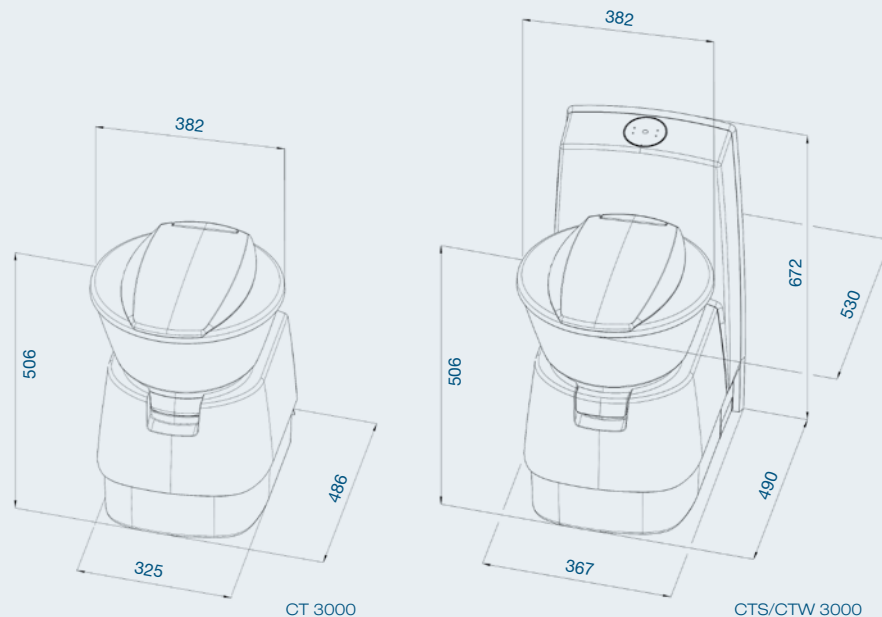

### Active ventilation possible

The CT 3000 is prepared for the installation of the active ventilation system SOG-3000A – so it can be used without chemicals. As soon as the slight valve is extracted the ventilation is activated to stop bad odours. Thanks to an exclusive cooperation with SOG for the first time a unique sanitary system can be provided with perfectly matching connections – especially for the electrical circuitry and optimum flow technology. Finely tailored adapters allow easy initial installation and refitting.

## Technical data

Model	CT 3000	CTS 3000	CTW 3000
