⚠️ WARNING FIRE OR EXPLOSION HAZARD.
If you smell gas:
1. Open windows.
2. Do not attempt to light appliance.
3. Do not touch electrical switches.
4. Extinguish any open flame.
5. Shut off fuel supply.
6. Evacuate immediately and call emergency services.
Failure to follow these instructions could result in fire or explosion, which could cause property damage, personal injury, or death.

⚠️ WARNING
Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to this manual. For assistance or additional information consult a qualified installer, service agency or the gas supplier.

⚠️ WARNING SUFFOCATION AND ENTRAPMENT HAZARD.
Prior to disposal of refrigerator:
1. Remove fresh food and freezer doors.
2. Leave shelves and baskets in place to prevent children from easily climbing inside refrigerator.

⚠️ WARNING FIRE OR EXPLOSION HAZARD.
Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

⚠️ Read these instructions carefully. These instructions MUST stay with this product.
INTRODUCTION

Thank you for purchasing your new Dometic refrigerator. This refrigerator (hereinafter referred to as "refrigerator," or "product") is designed and intended for use in recreational vehicles (hereinafter referred to as “RV,” or “RVs”). This refrigerator is designed for the storage of fresh and frozen foods, as well as making ice.

Use these instructions to operate your refrigerator safely and correctly. Keep these instructions with your refrigerator for future reference.

Dometic Corporation reserves the right to modify appearances and specifications without notice.

DOCUMENT SYMBOLS

Indicates additional information that is NOT related to physical injury.

 Indicates step-by-step instructions.

IMPORTANT SAFETY INSTRUCTIONS

This manual has safety information and instructions to help you eliminate or reduce the risk of accidents and injuries.

A. Recognize Safety Information

This is the safety alert symbol. It is used to alert you to potential physical injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

B. Understand Signal Words

A signal word will identify safety messages and property damage messages, and will indicate the degree or level of hazard seriousness.

WARNING indicates a hazardous situation that, if NOT avoided, could result in death or serious injury.

CAUTION indicates a hazardous situation that, if NOT avoided, could result in minor or moderate injury.

NOTICE is used to address practices NOT related to physical injury.

C. Supplemental Directives

Read and follow all safety information and instructions to avoid possible injury or death.

Read and understand these instructions before [installing / using / servicing / performing maintenance on] this product.

Incorrect [installation / operation / servicing / maintaining] of this product can lead to serious injury. Follow all instructions.

The installation MUST comply with all applicable local and national codes, including the latest edition of the following standards:

U.S.A.

- ANSI/NFPA70, National Electrical Code (NEC)
- ANSI/NFPA 1192, Recreational Vehicles Code
- Title 24 CFR, Part 3280, Manufactured Home Construction and Safety Standard
- National Fuel Gas Code, ANSI Z223.1/ NFPA 54

CANADA

- CSA C22.1, Parts I & II, Canadian Electrical Code
- CSA Z240 RV Series, Recreational Vehicles
- CSA Z240.4, Gas-Equipped Recreational Vehicles and Mobile Housing
- CSA B149.1, Natural Gas and Propane Installation Code
D. General Safety Messages

**WARNING** Failure to obey the following warnings could result in death or serious injury:

- This product **MUST** be [installed / serviced] by a qualified service technician.
- Do **NOT** modify this product in any way. Modification can be extremely hazardous.
- Disconnect product from power supply (if applicable), and do **NOT** operate product when cleaning or maintaining product.
- Do **NOT** allow anyone (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge to use this product, unless they have been given supervision or instruction (concerning use of this product) by a person responsible for their safety.
- Do **NOT** allow children to play with product or with fixed controls (if applicable).

**ABSORPTION-COOLING-SYSTEMS.** **FIRE, BURN, OR INHALATION HAZARD.** Do **NOT** fracture or puncture cooling unit. The cooling unit is under pressure and contains ammonia, sodium chromate, and other chemicals. Repeated or prolonged exposure to sodium chromate could cause organ damage or cancer. Exposure to a high concentration of ammonia refrigerant could cause pulmonary edema (fluid in lungs); chemical burns to eyes, lungs, and skin; and could cause a fire (when exposed to open flame).

**COMPRESSOR-COOLING-SYSTEMS.** **FIRE, FROSTBITE, OR INHALATION HAZARD.** Do **NOT** fracture or puncture cooling unit. The cooling unit is under pressure and contains tetrafluoroethane refrigerant, and may contain other chemicals. Contact with liquid refrigerant could cause irritation or frostbite to eyes and skin. Exposure to a high concentration of refrigerant could cause cardiac arrhythmia (irregular heartbeat). A high concentration of refrigerant could cause a fire (when exposed to open flame).

- **FIRE OR INHALATION HAZARD.** If refrigerator stops working and/or it emits an ammonia smell, immediately turn refrigerator OFF (if it is safe to do so), leave the vicinity, and contact a qualified Service Center.
- **CARBON MONOXIDE HAZARD.** This product can produce carbon monoxide. Carbon Monoxide has no odor and can kill you. The burner and flue system **MUST** be kept clean. Failure to obey this warning could result in death or serious injury.
- **FIRE OR EXPLOSION HAZARD.** Do **NOT** store or use gasoline, oil or gasoline soaked rags, or other flammable vapors and liquids in the service area behind the refrigerator or in the vicinity of this or any other gas appliance. Failure to obey this warning could result in death or serious injury.
- **FIRE OR EXPLOSION HAZARD. BEFORE** refueling or parking near a gasoline pump, make sure **ALL** LP gas appliances (vented to the outside of RV) are shut **OFF.** Otherwise, fumes from gasoline pumps could come into contact with an LP gas appliance burner flame and ignite. Failure to obey this warning could result in death or serious injury.
- **PRESSURE HAZARD.** Do **NOT** place carbonated liquids, glass containers, or sealed bottles or cans in freezer. Liquids expand when frozen and could cause container to explode. Failure to obey this warning could result in death or serious injury.

**CAUTION** Failure to obey the following caution could result in injury:

- **FROSTBITE OR FROSTNIP HAZARD.** Do **NOT** touch cold surfaces (or stored items) in freezer compartment with damp or wet skin. Skin could stick to cold surfaces and freeze.
REFRIGERATOR OVERVIEW

A. Absorption Cooling System

⚠️ See “General Safety Messages” for information on absorption cooling systems, and consequences of exposure to refrigerant.

When turning on the refrigerator, you should adjust the thermostat (excludes DM2652 & DM2852 - NOT adjustable) to the coldest temperature setting. The cooling cycle may require an extended running time before cooling effect is observed.

B. Keep Refrigerator Level

(ABSORPTION COOLING SYSTEM ONLY)

For optimal cooling performance, an absorption refrigerator must be level. If the refrigerator operates in a noticeable out-of-level condition for several hours, loss of cooling performance will occur.

When RV is parked and absorption system is operating, the RV must be level enough to live in and feel comfortable.

🌿 The RV does NOT need to be PERFECTLY level, but there should be no noticeable sloping of RV floor or walls.

🌿 It is NOT critical for refrigerator to be level while RV is traveling. The rolling and pitching motion of travel helps keep the absorption system balanced.

C. Operating Refrigerator At High Altitude

All gas appliances experience lowered efficiency (or rating) at high altitude. This is a direct result of lower atmospheric pressure and oxygen levels, and is not a defect of the refrigerator.

Reduced cooling performance and burner outage may occur at altitudes higher than 5500 feet above sea level (while operating on LP gas). Always operate refrigerator on electric power at altitudes higher than 5500 feet.

D. Purging Air From The Lines

If the refrigerator has not been used for a long time, or the LP tanks have just been refilled, air may be trapped in the supply lines. To purge the air from the lines, turn the refrigerator off and on by pressing the ON/OFF button. If the flame is not lit within 45 seconds, turn the refrigerator off and back on again. This procedure can be repeated 3 to 4 times. If repeated attempts fail to start the LP gas operation, check to make sure that the LP gas supply tanks are not empty and that all manual shutoff valves in the lines are open. If the problem persists, turn the refrigerator off and take it to a Service Center.

E. When The Refrigerator Is Not In Use

Any absorption refrigerator that is to be taken out of service for an extended period of time should be turned off.

🌿 It is important that you do NOT leave the refrigerator to run idle and/or unattended for days or weeks.

F. Automatic Energy Selector System

The refrigerator is equipped with an automatic energy selector system. The user turns the refrigerator on and then, the refrigerator automatically selects the most suitable energy source available, either 120 VAC or LP gas operation. The system can be set by the user to be fully automatic (AUTO mode is selected) or to operate on LP gas only (AUTO mode is off).

On 3-way models, the control system can manually be set to DC mode (DC operation). The DC mode overrides all other operating modes.

The refrigerator controls will work down to 9.6 VDC.

E. Temperature indicator lamps

FIG. 3
REFRIGERATOR OVERVIEW

H. Modes Of Operation

1. AUTO MODE
   When operating in AUTO mode, the AUTO mode indicator lamp is illuminated. The control system will automatically select between AC and GAS operation. AC has priority over GAS. Should AC become unavailable, the system automatically switches to GAS.
   As soon as AC becomes available again, the control will switch back to AC, regardless of the status of the GAS operation.
   If the CHECK indicator lamp is illuminated, the controls have failed to ignite the burner in the GAS mode. To restart an ignition attempt with the CHECK lamp illuminated (or to turn off the CHECK lamp), press the ON/OFF button OFF and back ON again. The control system activates the ignition system and makes attempts to light the burner for a period of approximately 45 seconds. Should 120 VAC become available while the CHECK indicator lamp is on, the CHECK lamp will not turn off until the ON/OFF button is pressed OFF and then ON again.

2. GAS MODE
   DM2652 & DM2852:
   When operating in GAS mode, the AUTO mode indicator lamp will be off.
   DM2662, DM2663 & DM2862:
   When operating in GAS mode, the GAS Mode indicator lamp is illuminated.
   This mode provides LP gas only. The control system activates the ignition system and attempts to light the burner for a period of approximately 45 seconds. If unsuccessful, the CHECK indicator lamp will illuminate.
   To restart GAS operation, press the ON/OFF button to OFF and then back ON. The control system attempts a new ignition sequence.

3. DC MODE
   DM2663
   When operating in DC mode (3-way models only), the DC mode indicator lamp is illuminated and all other lamps are off. To select another operating mode, turn off the DC mode by pressing the DC selector button. The DC lamp is turned off.
   When there is no charging of the house battery, switch to AUTO mode or GAS mode, since running the refrigerator on 12 VDC will quickly drain the battery.

4. LIMP MODE OF OPERATION
   In the event of a failure of a major operating component, the control system will continue to operate the cooling system.
   DM2652 & DM2852:
   If the control can not read the temperature sensor and control the preset temperature, the control will run the cooling unit continuously at the energy source available. The refrigerator continues to operate in this mode indefinitely or until a new sensor is installed and the system is reset.
   DM2662, DM2663 & DM2862:
   Two modes of operation can occur:
   a. The first limp mode of operation will execute if the display module becomes nonfunctional. The control system reverts to full automatic operation, selecting the best energy source available with AC, DC (3-way only) and GAS priority. The temperature setting is maintained at the mid position. The power module will continually attempt to re-establish operation of the display module.
   b. The second limp mode of operation will execute when a failure of the temperature sensing device or associated electronic circuitry occurs. If this should happen, the control system operates on the energy source selected via the control panel. The cooling unit runs continuously on the selected energy source. The refrigerator continues to operate in this mode indefinitely or until a new sensor is installed and the system is reset.
A. Starting The Refrigerator

**WARNING** FIRE HAZARD. Make sure there are NO obstructions (blockage) between burner jet and burner tube BEFORE lighting LP gas burner. Failure to obey this warning could result in death or serious injury.

**WARNING** FIRE OR EXPLOSION HAZARD. BEFORE refueling or parking near a gasoline pump, make sure ALL LP gas appliances (vented to the outside of RV) are shut OFF. Otherwise, fumes from gasoline pumps could come into contact with an LP gas appliance burner flame and ignite. Failure to obey this warning could result in death or serious injury.

1. Check that all the manual gas valves are in the ON position.
2. Make sure that a continuous 12 VDC supply is available for the electronic control to function.
3. Press the ON/OFF button.
4. Select operation mode:
   a. **AUTO mode** (AC and Gas)
      Press the AUTO/GAS mode selector button (if not already on). The illuminated lamp indicates the selected mode.
      If the CHECK indicator lamp is illuminated, see “1. AUTO MODE” on page (7).
   b. **GAS mode** (LP gas operation only)
      Press the AUTO/GAS mode selector button to turn off the AUTO mode (if not already off). Within 45 seconds the burner should be ignited and operating normally. If not, see “2. GAS MODE” on page (7).
   c. **DC mode** (3-way models only)
      Press the DC mode indicator button. The DC lamp will be turned on. To select AUTO or GAS mode, turn off the DC mode by pressing the DC mode selector button. The DC lamp will then be turned off.

B. Adjusting The Thermostat

**DM2662, DM2663 & DM2862:**
The thermostat controls both the gas and electric operation, thereby eliminating the necessity of resetting each time a different energy source is employed. After the initial start-up, the thermostat should be adjusted to the desired temperature setting.

1. Press the temperature selector button until the lamp at the desired setting is illuminated.

**DM2652 & DM2852:**
The temperature is controlled by a factory preset temperature setting.

C. Extreme Cold Weather Operation

Refrigerator performance may be reduced in extremely cold (sub-zero) temperatures. This temporary condition is normal for absorption refrigerators and does not indicate product failure. In the event that performance is reduced in such conditions, turn the refrigerator off. As ambient temperatures rise, please restart your refrigerator according to instructions before requesting service.

D. Operating The Ice Maker

**ICE MAKER MODELS ONLY**
Before the ice maker can operate, make sure that:
- The refrigerator is connected to 120 VAC.
- The water valve supplying the refrigerator is turned on.
- The ice level bail arm is in its fully down position.

Keep bail arm in the up (OFF) position until water is present at the ice maker. See (FIG. 5).

When the ice maker thermostat senses the preset temperature for the ejection of the ice cubes, the fingers will start to rotate, dumping any ice cubes and filling the mold with water. When the storage container is full, the bail arm will come in contact with the ice cubes. The bail arm cannot return to the full down position and the ice production is stopped until the bin is emptied, or ice cubes are removed.
INSTRUCTIONS FOR USE

To prevent water from splashing out of the mold assembly while travelling in your RV, raise the bail arm to the full UP/OFF position about 1-1/2 hours before departing. This will allow the water in the mold to freeze.

WATER SUPPLY

The water supply system must have a minimum pressure of 15 pounds per square inch gauge (psig). A 1/4" diameter water line to the water valve should be used at the rear of the refrigerator. The water line must have a manual shutoff valve placed where it is easily accessible.

The maximum water level is represented by a thin line. It is essential that the water level does not exceed this line! See (FIG. 6).

If necessary, change the water flow by adjusting the water supply. For instructions, see “E. Adjusting The Size Of Cubes”.

E. Adjusting The Size Of Cubes

If the ice maker was cleaned and drained, no ice cubes will be dumped into the bin during the first cycle.

The first few cycles may have small cubes due to air trapped in the water lines. The first container of ice cubes should be dumped if the water system has been winterized or not used for several weeks. Once the ice maker has run through several cycles, and if cubes are too small or sticking together, adjustment is necessary on the amount of water entering the mold.

TO ADJUST THE SIZE OF CUBES, FOLLOW THESE STEPS:

1. Remove the protective cover from the ice maker mechanism. Using a flat-bladed screwdriver, place the tip of the screwdriver in the slot. Twist the screwdriver blade gently to loosen the cover. See (FIG. 7).

2. Locate the adjusting screw under the protective cover. Turn the screw counterclockwise to increase the size of cubes. See (FIG. 8).

3. Turn the screw clockwise to decrease the cube size or if the mold is overfilling, and the cubes are stuck together. See (FIG. 8).

To prevent overfilling, do NOT turn the adjustment screw more than one revolution at a time. Allow the ice maker to cycle several times before another adjustment is made. Be sure to replace the protective cover on the cycle after the adjustments are complete.

F. Turning Off The Refrigerator, And When Not In Use

You can turn off your refrigerator by pressing the main power ON/OFF button found on the control panel to the OFF position. This will shut off all power to the refrigerator, including DC power to the refrigerator. See (FIG. 1), (FIG. 2) and (FIG. 3).
INSTRUCTIONS FOR USE

If the refrigerator will not be in operation for an extended period of time or put into winter storage, it should be emptied, defrosted, cleaned, and the doors placed in the airing position (see "B. Airing Position" on page (11). If ice cube trays are in use, they should also be dried and kept outside the cabinet.

**NOTICE** This refrigerator is intended for continuous use. Do **NOT** allow it to run unattended when there is a risk for loss of electricity or fuel. Food spoilage could occur.

STORAGE COMPARTMENTS

**WARNING** FIRE OR EXPLOSION HAZARD. Do **NOT** store or use gasoline, oil or gasoline soaked rags, or other flammable vapors and liquids in the service area behind the refrigerator or in the vicinity of this or any other gas appliance. Failure to obey this warning could result in death or serious injury.

**REFRIGERATOR VOLUME**

<table>
<thead>
<tr>
<th>MODEL</th>
<th>TOTAL REFRIGERATED VOLUME (CU. FT)</th>
</tr>
</thead>
<tbody>
<tr>
<td>DM2652, DM2662 &amp; DM2663</td>
<td>6</td>
</tr>
<tr>
<td>DM2852 &amp; DM2862</td>
<td>8</td>
</tr>
</tbody>
</table>

A. Food Storage Compartment

- Cool the refrigerator before placing any food inside. Never put hot food or drinks into the refrigerator - cool them first.
- The food storage compartment is completely closed and unventilated, which is necessary to maintain the required low temperature for food storage. Consequently, foods having a strong odor or those that absorb odors easily should be covered.
- Vegetables, salads, etc. should be covered to retain their crispness.
- The coldest positions in the refrigerator are under the cooling fins and at the bottom of the refrigerator. The warmer areas are on the upper door shelves. This should be considered when placing different types of food in the refrigerator.
- Arrange all food in the unit to allow for free air circulation. Do not overpack because a stuffed refrigerator must work harder and will have higher cabinet temperatures.
- Do not leave the unit's door open any longer than necessary. This will reduce frost formation and increase the efficiency of the refrigerator.

B. Frozen Food Storage Compartment

This compartment is not designed for deep or quick freezing of food.
- To prevent food from drying out, keep it in covered dishes, containers, plastic bags or wrapped in aluminum foil.
- Meat or fish, whether raw or prepared, can be stored in the frozen food storage compartment provided they are precooled first in the refrigerator. They can be stored about three times longer in the frozen food compartment as compared to the fresh food compartment.
- Quick frozen soft fruits and ice cream should be placed in the coldest part of the compartment, which is at the bottom of the aluminum liner.
- Frozen vegetables may be stored in any part of the compartment.
- To prevent frost buildup, which can reduce the efficiency, wipe excess moisture off items being placed in the compartment.

C. Removing And Replacing The Shelves

1. Remove the shelf locks by inserting the tip of a flat-bladed screwdriver into the slot of the locks. Turn the screwdriver counterclockwise and then remove the shelf locks from the wire shelf. See (FIG. 9).

2. Slide the shelf to the left until bushings disengage, then tilt the shelf to one side at an angle while pulling forward. See (FIG. 10).
3. Reposition the shelf in the desired location. Insert the ends of the wire shelf on the left-hand side and slide the shelf into the holes on the right-hand side. See (FIG. 10).
4. Slide the plastic plugs into the holes of the wall.
5. Snap the shelf locks back onto the wire shelf. See (FIG. 11).

D. Ice Cubes

Ice cubes can be made in the freezer compartment. For faster freezing, place trays in direct contact with the bottom of the freezer compartment.

DM2662, DM2663 & DM2862:

Ice will be made more rapidly if the thermostat is set at its highest position, but be sure to move the thermostat back to normal setting when ice is formed; the refrigerator might otherwise become too cold.

PRODUCT CARE

A. Defrosting

1. Shut off the refrigerator by pressing the main power ON/OFF button (OFF position).
2. Empty the refrigerator.
3. Leave the cabinet and freezer doors open and make sure the drip tray is in place under the finned evaporator.

Defrosting time can be reduced by filling ice trays with hot water and placing them in the freezer compartment.

WARNING FIRE, BURN, OR INHALATION HAZARD. Do NOT fracture or puncture cooling unit. This could cause a leak in the cooling system. See “General Safety Messages” for information on cooling systems, and consequences of exposure to refrigerant.

Do NOT use a knife, ice pick, or any other sharp tool to remove frost from freezer compartment.

NOTICE Do NOT use a hot air blower to remove frost from storage compartment(s). Permanent damage could occur, including warped metal or plastic parts.
4. When all the frost has melted, dry the interior with a clean cloth and turn the refrigerator back on.

DM2662, DM2663 & DM2862:

5. Set the thermostat to the coldest setting for a few hours. Then, reset the thermostat to the desired setting, usually at mid setting. Replace food after refrigerator has reached appropriate cool temperature.

B. Airing Position

DM2652, DM2662, DM2663, DM2852 & DM2862:

Use the airing position card to keep the doors ajar if the refrigerator is put in storage or will not be used for an extended period of time. See (FIG. 13).
C. Cleaning

Always keep the refrigerator clean. Cleaning the refrigerator is usually done after it is defrosted or put into storage. Use a lukewarm, weak soda solution to clean the interior liner of the refrigerator. Use warm water only to clean the finned evaporator, gasket, and shelves. Do not spray liquids near electrical outlets, connections, or the refrigerator components.

After cleaning the interior liner/evaporator fins, make sure thermistor bulb and thermistor bracket are properly positioned. See “Troubleshooting” on page (15).

**NOTICE** Do **NOT** use strong chemicals or abrasives to clean parts, as their protective surfaces will be damaged.

To keep the refrigerator operating efficiently, periodic inspection and cleaning of several components once a year is recommended:

- Check the lower vent, upper vent and area between these openings for any obstructions such as bird/insect nests, spider webs, etc.
- Make sure the refrigerator area is free from combustible material, gasoline and other flammable vapors or liquids.

**WARNING** FIRE OR EXPLOSION HAZARD. Do **NOT** store or use gasoline, oil or gasoline soaked rags, or other flammable vapors and liquids in the service area behind the refrigerator or in the vicinity of this or any other gas appliance. Failure to obey this warning could result in death or serious injury.

- If accessible, clean the coils on the back of the refrigerator. Use a soft bristled brush to dust off the coils.

D. Storage Procedure / Winterizing The Refrigerator

**ICE MAKER MODELS ONLY**

The refrigerator is equipped with a heater tape wrapped around the water solenoid valve and outlet water tube. During cold weather operation below 32°F/0°C, the automatic temperature switch will turn the heater tape on automatically.

If the RV will not be in use for an extended period of time or put into storage:

- Drain the RV water system.
- Disconnect the water lines from the inlet and outlet sides of the water valve. Drain the lines into a cup and allow the lines to dry.
- The ice maker should be drained and dried. Note that this procedure must be performed by a qualified service technician.
- Using a lukewarm soda solution, clean the interior liner of the refrigerator. Clean the finned evaporator and shelves. Use warm water only and never strong chemicals or abrasives, since these can damage the protective surfaces.
- Place doors in the airing position.
MAINTENANCE & SERVICE

To keep the refrigerator working properly, a qualified service technician should, at least once a year, inspect the connections, the control system, the LP gas pressure and flue baffle.

WARNING FIRE OR INHALATION HAZARD. If refrigerator stops working and/or it emits an ammonia smell, immediately turn refrigerator OFF (if it is safe to do so), leave the vicinity, and contact a qualified Service Center. A high concentration of ammonia refrigerant could cause an inhalation hazard, could cause chemical burns to the skin and eyes, and could cause a fire resulting in death or serious injury.

A. Replacing/Resetting The Fuses

2-way models are equipped with 2 fuses - one for the refrigerator control system and one for the AC heater.

The fuse for the control system is a resettable fuse and can NOT be replaced.

If the resettable fuse has been tripped, determine and remedy the cause. Once this has been done, reset the control system fuse by pressing the ON/OFF button to OFF, wait 5 seconds, and then back ON.

3-way models are equipped with 3 fuses - two fuses in the power module and one inline blade fuse.

<table>
<thead>
<tr>
<th>Control System</th>
<th>3 A</th>
</tr>
</thead>
<tbody>
<tr>
<td>AC Heater</td>
<td>5 A</td>
</tr>
<tr>
<td>12 Vdc Heater</td>
<td>30 A</td>
</tr>
</tbody>
</table>

REPLACING THE FUSES

Power Module
To replace the fuses, follow these steps:

1. Turn off the refrigerator and unplug the power cord and disconnect the 12V wires.
2. Remove the power module cover.
3. Snap the fuse out of the fuse holder and fit the new fuse in to the fuse holder.
4. Put back the power module cover.

DM2652 (OPTIONAL FAN), DM2852 (OPTIONAL FAN) & DM2862 (OPTIONAL FAN):

Inline Fuse
The inline fuse for the power vent fans is connected to the 12V DC socket.
To replace the inline fuse, follow these steps:

1. Disconnect 12V DC power.
2. Open the fuse holder. See (FIG. 14).

3. Replace the fuse. See (FIG. 15).

4. Put the holder back together. See (FIG. 16).

B. Periodic Maintenance

To be performed by a qualified service technician only.

CHECKING THE LP GAS CONNECTIONS

1. Check all connections in the LP gas system (at the back of the refrigerator) for gas leaks. The LP gas supply must be turned on.
2. Apply an approved leak detection solution to all LP gas connections. The appearance of bubbles indicates a leak and should be repaired immediately!

WARNING FIRE OR EXPLOSION HAZARD. NEVER use an open flame to check for gas leaks. Failure to obey this warning could result in death or serious injury.

CHECKING THE CONTROL SYSTEM
Check the control system by connecting/disconnecting the 120 VAC power, starting/stopping the engine, etc.

CLEANING THE BURNER

1. Turn off the refrigerator.
2. Unplug the power cord from the 120 VAC outlet. Disconnect the wires or shut off the 12 VDC power supply to the refrigerator.
3. Turn off the manual shut off valve.
4. Remove cover from burner housing.
5. Clean the burner tube with a brush. Blow out the burner with compressed air.
MAINTENANCE & SERVICE

WARNING  FIRE OR EXPLOSION HAZARD. NEVER use a wire or pin to clear obstructions from burner jet (damage will occur). Failure to obey this warning could result in death or serious injury.

DATA WARNING  FIRE OR EXPLOSION HAZARD. Do NOT attempt to adjust burner jet. Failure to obey this warning could result in death or serious injury.

6. Verify that the burner jet slots are centered under the flue tube. See (FIG. 18).
7. Be sure to check the burner flame for proper appearance. The flame should be clear blue over the slots of the burner. See (FIG. 18).

8. Check the electrode for proper location and gap. Adjustments may be made with needle nose pliers if necessary. See (FIG. 19).

10. Examine all fittings for leaks. Use a commercial non-corrosive bubble solution.
11. Connect the 120 VAC power cord.
12. Reconnect/Turn on the 12 VDC power.
13. Check LP gas safety shutoff.

C. Refrigerator Removal / Disposal

To be performed by a qualified service technician only.
See Installation Instructions for refrigerator removal / replacement procedure, and for recycle information.
**TROUBLESHOOTING**

If you run into a problem, refer to the troubleshooting table below.

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Check / Remedial Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Refrigerator stops cooling.</td>
<td>● Immediately turn the refrigerator off and contact a Dometic dealer or Service Center.</td>
</tr>
<tr>
<td></td>
<td>NOTE! Do not leave it running for an extended period of time, and never try to solve the</td>
</tr>
<tr>
<td></td>
<td>problem by repeatedly restarting the refrigerator.</td>
</tr>
<tr>
<td></td>
<td>● Do not use the refrigerator until it has been repaired.</td>
</tr>
<tr>
<td>Refrigerator emits an ammonia smell.</td>
<td>● Immediately turn the refrigerator off at the front control panel.</td>
</tr>
<tr>
<td></td>
<td>● Do NOT open refrigerator doors.</td>
</tr>
<tr>
<td></td>
<td>● Open RV windows and doors (to air out the RV) and evacuate.</td>
</tr>
<tr>
<td></td>
<td>● Turn off manual LP gas valve at rear of refrigerator.</td>
</tr>
<tr>
<td></td>
<td>● Disconnect the 120 VAC power at rear of refrigerator.</td>
</tr>
<tr>
<td></td>
<td>● Contact a Dometic dealer or Service Center for repair.</td>
</tr>
<tr>
<td></td>
<td>● Do not use the refrigerator until it has been repaired.</td>
</tr>
<tr>
<td>Refrigerator or freezer is not cold enough.</td>
<td>● For refrigerators equipped with a thermostat, check the thermostat and adjust if necessary.</td>
</tr>
<tr>
<td></td>
<td>● Is the plug firmly seated in the outlet? Does the outlet have power? Check the outlet by plugging in another appliance.</td>
</tr>
<tr>
<td></td>
<td>● Is the refrigerator level? (Due to the nature of its operation, it is important to keep an absorption refrigerator level.)</td>
</tr>
<tr>
<td></td>
<td>● Door closing properly? Check the door gasket.</td>
</tr>
<tr>
<td></td>
<td>● Heavy frost build-up on evaporator fins? To prevent frost build-up, do not leave the unit’s door open longer than necessary.</td>
</tr>
<tr>
<td></td>
<td>● Over packed refrigerator? The unit will have to work harder if the refrigerator is stuffed, and results in higher cabinet temperatures. Arrange the food in the unit to allow for free air circulation.</td>
</tr>
<tr>
<td>Refrigerator does not work on electric.</td>
<td>● Is the plug firmly seated in the outlet? Does the outlet have power? Check the outlet by plugging in another appliance.</td>
</tr>
<tr>
<td></td>
<td>● Is there a power failure?</td>
</tr>
<tr>
<td></td>
<td>● Blown fuse. Turn refrigerator off and contact a Dometic dealer or Service Center for repair.</td>
</tr>
<tr>
<td>Refrigerator does not work in gas operation mode.</td>
<td>● LP gas bottle empty? Change the gas bottle.</td>
</tr>
<tr>
<td></td>
<td>● Air in the gas line? Remove the air by repeating the ignition sequence.</td>
</tr>
<tr>
<td></td>
<td>● If problem persists, turn refrigerator off and contact a Dometic dealer or Service Center for repair.</td>
</tr>
<tr>
<td>Refrigerator emits an odor from fumes.</td>
<td>● Dislocated or damaged burner. Turn refrigerator off and contact a Dometic dealer or Service Center for repair.</td>
</tr>
<tr>
<td></td>
<td>● Dirty flue tube. Turn refrigerator off and contact a Dometic dealer or Service Center for repair.</td>
</tr>
<tr>
<td>Refrigerator too cold.</td>
<td>● Dislocated thermistor bracket. Clip thermistor bracket to last fin on right side of cooling flange and center vertically on fin.</td>
</tr>
<tr>
<td></td>
<td>● Dislocated thermistor bulb. Position thermistor bulb inside thermistor bracket groove and center vertically in bracket.</td>
</tr>
</tbody>
</table>

If the problem persists and the refrigerator is still not working properly, turn refrigerator off and contact your nearest Service Center. State the problem, model, product, and serial number. These details are stated on the data label inside the refrigerator compartment.

APPENDIX D - CONSUMER SUPPORT

Dometic website  www.DometicUSA.com

Please visit our website for information and news about Dometic products. Our website provides information on product care and warranties. You can also download product literature, including manuals and brochures.

Service and spare parts  www.eDometic.com

For service and spare parts, please contact Service Center Assistance. Please see the front page of this manual - or - visit our Dometic website to find a Dometic Service Center near you.

Contact us  www.DometicUSA.com

For contact information, please see the front page of this manual - or - visit our Dometic website.

Register product  www.eDometic.com

Timely registration allows for enhanced communication and service under the terms of your warranty. Please see “Appendix E - Dometic Warranty” on page (21).
To register your product, fill in the pre-printed registration card on the last page of this manual, or register on-line at www.eDometic.com.

TO REGISTER ON-LINE:

1. Access www.eDometic.com then click “Register your Dometic PRODUCT.”

2. Complete the on-line form, then click “SUBMIT.”
LIMITED TWO-YEAR WARRANTY (DOMETIC REFRIGERATORS)

THE SELLER NAMED BELOW MAKES THE FOLLOWING WARRANTY WITH RESPECT TO THE DOMETIC PRODUCT:

1. This Warranty is made only to the first purchaser (hereinafter referred to as the “Original Purchaser”), who acquires the Dometic Product for his or her own use and when the Dometic Product is installed and operated within the continental United States and Canada.

2. WARRANTY PERIOD: This Warranty will be in effect for two (2) years from the date of purchase by the Original Purchaser. The Original Purchaser should retain a copy of the dated bill of sale as evidence of the date of purchase.

3. WARRANTY: This Warranty covers labor, specified parts, and freight. The Dometic Product shall be free from defects in material and workmanship at the time of sale and under normal use. All Dometic Products (except those specifically built for commercial use) are warranted only when installed per the Seller’s installation instructions on vehicles built to R.V.I.A. A119-2 and C.R.V.A. Z-240 Standards. This Warranty does NOT cover conditions unrelated to the material and workmanship of the Dometic Product. Such unrelated conditions include, but are not limited to: (a) damage not reported within 10 days of ownership; (b) faulty installation or installation that does not comply with the Seller’s instructions or R.V.I.A. and C.R.V.A. standards, and any damage resulting from such; (c) damage or failure caused by installation of accessories not manufactured and marketed by the Seller or any non-Dometic parts that are installed as replacement parts; (d) the need for normal maintenance and any damage resulting from the failure to provide such maintenance; (e) failure to follow Seller’s instructions for use of this Dometic Product; (f) flame outage due to blow out or high altitude; (g) reduced performance due to high altitude; (h) radio frequency interference (RFI) or electromagnetic interference (EMI); (i) 12 VDC system chassis ground decay and corrosion; (j) puncture of foam cabinet or vacuum insulated panels after acknowledged receipt; (k) animal or insect infiltration which damages unit or inhibits performance; (l) any accident to, or misuse of, any part of the Dometic Product and any alteration by anyone other than the Seller or its authorized representative; and (m) normal wear.

4. WARRANTY COVERS DOMETIC COMPONENT PARTS: Major components (cooling unit, LP gas valve, burner, burner housing, electronic display, electronic module, evaporator fins, foam integrity, frame, thermistor, spark probe, ignition wire, ice maker compressor, second absorption loop, display escutcheon, lower toe plate, humidity switch, frame heater mullion, ice maker mullion) are covered for labor, parts and freight for two (2) years from date of purchase. All other components that fail must be reported within the first 90 days of ownership in order to receive warranty coverage for labor, parts and freight.

5. The Original Purchaser must provide preventative maintenance on a yearly basis, beginning at the first anniversary of the date of purchase. The Original Purchaser must keep a record of the preventative maintenance to keep the warranty in effect. Failure of the Original Purchaser in providing this annual maintenance may void the warranty. The preventative maintenance must be performed at a Dometic Authorized Service Center/Dealer. The required preventative maintenance is an inspection, cleaning and full diagnostics performed on the entire electronic system, burner assembly, wiring and cooling unit. A copy of the receipt covering the maintenance checks must accompany the warranty claim during the second year of ownership. The cost of this preventative maintenance is the Original Purchaser’s responsibility and the preventative maintenance should take about one hour.

6. WARRANTY REMEDY: In order to obtain the benefits of this Warranty, the Original Purchaser has the following two options during the WARRANTY PERIOD:

   a. Preferred option: Deliver the Dometic Product for inspection to the nearest Authorized Dometic Service Center during the Warranty Period. To obtain the location of the nearest Authorized Dometic Service Center, refer to https://www.dometic.com/en-us/us/find-a-dealer. The Authorized Dometic Service Center will work with the Seller to obtain Warranty coverage if a Seller defect is identified. CONFIRM THE SERVICE CENTER IS AN AUTHORIZED DOMETIC SERVICE CENTER. DO NOT PAY THE SERVICE CENTER FOR WARRANTY REPAIRS.

   b. Second option: If it is not feasible under the circumstances to deliver the Dometic Product to an Authorized Dometic Service Center, please call 1-800-544-4881 for additional Warranty assistance. Seller prefers option a. first and only option b. if option a. is determined not to be feasible under the circumstances.

7. Any item returned in the manner described in paragraph 6 will be examined by the Authorized Dometic Service Center. If it is found that the returned item was defective in material and workmanship at the time of sale, the Authorized Dometic Service Center will contact the Seller for Warranty coverage. The Seller shall, at Dometic’s sole option, repair or replace the Dometic Product, or refund Original Purchaser’s purchase price. If the Seller determines that repairs to the Dometic Product are to be made, then only authorized Dometic parts will be used.

8. The Seller does not authorize any person or company to create any Warranty obligations or liability on its behalf. This Warranty is not extended by the length of time which you are deprived of the use of the Dometic Product.

9. IN NO EVENT SHALL SELLER BE LIABLE FOR EITHER INCIDENTAL OR CONSEQUENTIAL DAMAGES. THIS INCLUDES ANY DAMAGE TO ANOTHER PRODUCT OR PRODUCTS RESULTING FROM SUCH A DEFECT. SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATIONS MAY NOT APPLY TO YOU.

10. ANY IMPLIED WARRANTY, INCLUDING THE IMPLIED WARRANTY OF MERCHANTABILITY AND FITNESS FOR ANY PURPOSE, IS LIMITED TO THE DURATION OF THIS LIMITED WARRANTY. SOME STATES DO NOT ALLOW LIMITATIONS ON HOW LONG AN IMPLIED WARRANTY LASTS, SO THE ABOVE LIMITATION MAY NOT APPLY TO YOU.

11. THIS WARRANTY GIVES SPECIFIC LEGAL RIGHTS, YOU MAY ALSO HAVE OTHER RIGHTS WHICH VARY FROM STATE TO STATE. No action to enforce this Warranty shall be commenced later than ninety (90) days after the expiration of the Warranty Period. Claims must be submitted in writing to the Dometic Warranty Department.

12. The Seller reserves the right to change the design of any Dometic product without notice and with no obligation to make corresponding changes in Dometic products previously manufactured.
